João Mário Abreu

+55 (31) 97529-2283 • abreujoaomr@gmail.com
github.com/joaom-abreu • linkedin.com/in/joao-mario-abreu

Skills

- **Languages:** Java, Go, Python, SQL
- **Backend:** Spring Boot
- **Databases:** PostgreSQL, MongoDB, Supabase
- **DevOps & Tools:** Docker, CI/CD, Linux, Git, Vercel

Experience

Teaching Assistant, Theory of Computation *Oct 2026 – Dec 2026*
PUC Minas
Support undergraduate students in the Theory of Computation course, helping them understand the course content and work through exercises.

Projects

Scribd to PDF *Sep 2026*
Personal project • github.com/joaom-abreu/scribd-to-pdf
A Python app that uses Playwright to automate Chromium, capturing each page shown in the Scribd reader and merging them into a single PDF in the correct order. It has a Tkinter GUI and a CLI, saves progress to a JSON file so interrupted captures can be resumed, and checks the page count of the generated PDF before saving it. Includes tests with pytest. Stack: Python, Playwright, Tkinter, img2pdf, pypdf and pytest.

Courtside API *Oct 2026 – Present*
Personal project • github.com/joaom-abreu/courtside-api
Developing a REST API for NBA statistics in Go, structured in layers (domain, repository, service and handlers). Teams, players, seasons and games are modeled in PostgreSQL with versioned migrations and type-safe queries generated by sqlc. The project includes unit tests and runs with Docker Compose. Stack: Go, PostgreSQL, sqlc and Docker.

Developer Portfolio Website *Oct 2026*
joaoabreu.vercel.app
A personal website to showcase my projects. It fetches profile data from the GitHub API through a custom serverless endpoint on Vercel, displays my recent GitHub activity and tracks visits with Supabase. The project uses React, Vite, JavaScript, Vercel and Supabase.

Education

B.S. in Software Engineering *Expected Dec 2029*
Pontifical Catholic University of Minas Gerais (PUC Minas)

Languages

- Portuguese – Native
- English – Advanced (C1)
- Spanish – Intermediate (B1)
- Mandarin Chinese – Beginner (A1)
